AFIRM Mission & Vision

Mission

AFIRM Group (Apparel and Footwear International RSL Management Working Group, established in 2004) is on a mission to reduce the use and impact of harmful substances in the apparel and footwear supply chains.

Our purpose is to provide a forum to advance the global management of restricted substances in apparel and footwear, communicate information about chemicals management to the supply chain, discuss concerns, and exchange ideas for improving chemicals management.

Vision

AFIRM is recognized as a global center of excellence, providing resources to enable continuous advancement of chemicals management best practices.

We do this based on transparency, science, and collaboration with relevant industries and experts to build safer and more sustainable chemistry within the apparel and footwear supply chains.

As we implement this vision, AFIRM's mission, objectives, and projects will remain product-focused or RSL-related.

Legal Statement

The AFIRM RSL constitutes information from AFIRM only and does not represent any individual AFIRM member. Individual brand RSLs may differ in specific parameters.

The AFIRM RSL is not intended to and does not establish any industry standard of care. The AFIRM RSL may not always provide the most appropriate approach for any individual company's chemical management program. Many brands have implementation guidelines, and suppliers must follow those guidelines where required.

The AFIRM RSL does not constitute legal advice and is not a substitute for legal advice. There is no warranty, express or implied, as to the completeness or utility of the information contained in this AFIRM RSL, including, without limitation, that the information is current and error-free. AFIRM disclaims liability of any kind whatsoever resulting from any use of or reliance on the AFIRM RSL.

Policy Statement

AFIRM has created the following Restricted Substances List ("AFIRM RSL") to assist supply chain participants seeking to increase product quality and safety, or to reduce their environmental impact by limiting the use of certain substances in apparel and footwear.

AFIRM acknowledges that a brand's offerings may include closely related products utilizing the same or similar materials, such as accessories, jewelry, sporting good equipment, wearables, and home textiles. The AFIRM RSL may be applied to these additional product types, and examples are included in the scope of this document for guidance; however, the primary focus of the AFIRM RSL remains apparel and footwear. AFIRM recommends that suppliers check with their brand customers for specific requirements regarding additional product categories.

Scope of the AFIRM RSL

Per the Policy Statement on the previous page, the primary focus of the AFIRM Group and the AFIRM RSL is apparel and footwear.

However, the AFIRM RSL may also be applied to accessories, jewelry, sporting good equipment, wearables, and home textiles.

- **Apparel.** Any garment worn on the body intended to protect, cover, or adorn.
- Footwear. Any durable covering for the feet intended to protect, cover, or comfort.
- Accessories. Any product intended to complement apparel, both carried and worn.
- Jewelry. Small decorative items worn for personal adornment such as rings, necklaces, earrings, pendants, bracelets and cufflinks. Jewelry may be attached to the body or clothing.

- Sporting Good Equipment. Any product intended for use in sport or exercise, including protective equipment.
- Wearables. Battery-powered electronic devices intended to be worn on the body during normal use. The AFIRM RSL covers components used on the external portion (i.e. skin contact) of the wearable product. Please note that certain wearable products, such as fitness trackers worn on the wrist, could also be classified as jewelry. AFIRM recommends that suppliers check with their brand customers regarding specific testing requirements for wearable components.
- **Home Textiles.** Any product intended for functional or decorative purposes in the home.

For guidance purposes, AFIRM provides examples of products to which the AFIRM RSL may be applied, including but not limited to those listed in Table 1.

Table 1. Exam	ples of Product	s within the	Scope of	the AFIRM RSL
---------------	-----------------	--------------	----------	---------------

Apparel	Footwear	Accessories	Equipment	Wearables	Home Textiles
 Shirts Pants/trousers Shorts Skirts Dresses Swimwear Socks Jackets Vests Sweatshirts and hoodies Sweaters Underwear Sleepwear and loungewear 	 Lifestyle Athletic (e.g. running, training) Sports (e.g. basketball, soccer, football, baseball) Sandals Flip flops Boots Slippers 	 Hats Headbands Scarves Handbags Backpacks Sunglasses Shoelaces Belts Hair clips Gloves (e.g. winter) Jewelry 	 Shin and leg guards Gloves (e.g. baseball, football, golf) Chest protectors Balls (e.g. basketball, football, soccer) Helmets Shoulder, knee, and elbow pads Yoga mats and blocks Rackets (e.g. tennis, racquetball, badminton) Fitness equipment (e.g. treadmills) Bicycles 	 Fitness trackers (worn on wrist, chest, finger, ear, etc.) Heart-rate monitors Digital watches Smart watches Smart apparel and footwear Wireless headphones and earbuds 	 Towels Bathrobes Bed linens (e.g. sheets, pillowcases, duvets) Blankets

Additional Product-specific Regulatory Requirements

Please note that the following items have additional product-specific regulatory requirements that fall outside the scope of the AFIRM RSL.

Suppliers must take additional steps to ensure products produced in their facilities comply with all such requirements—which include safety, flammability, and more.

- **Toys.** These products have regulatory and specific chemical requirements.
- Sunglasses and Children's Jewelry. These types of accessories have non-chemical safety requirements.
- **Protective Equipment.** These products have non-chemical safety and performance standards (e.g. NOCSAE).
- Food-contact Materials. These products have regulatory and specific chemical requirements.
- Electrical and Electronic Components. Components of products that do not come into contact with the skin are subject to other regulatory requirements (e.g. RoHS, EU Batteries Regulation).

Because AFIRM member brands may differ on the types of products classified under each of these categories, suppliers are advised to check with their customers regarding brand-specific definitions, requirements, and product applicability.

Uses of the AFIRM RSL

AFIRM member brands may differ on individual parameters; suppliers are advised to check with the customer regarding brand-specific requirements.

The AFIRM RSL leverages AFIRM's mission — to reduce the use and impact of harmful substances in the apparel and footwear supply chain — by providing a single set of information for maximum and in-depth implementation within the supply chain.

Some examples of uses for the AFIRM RSL, depending on the objectives of the user, include:

- Providing a tool for vendors to establish chemical management knowledge and processes.
- Building full or base compliance with AFIRM member chemical restrictions.
- Providing a common base for testing, which may be accepted by multiple AFIRM brands.
 AFIRM member companies determine and communicate to their vendors their testing requirements and acceptance of test reports.

Additional Substances and Parameters to Consider

EU REACH Substances of Very High Concern

Based on scientific evidence indicating potential hazards to human health or the environment, the European Commission (EC) and European Union (EU) member states propose substances of very high concern (SVHCs) for placement on the European Chemicals Agency (ECHA) "Candidate List of Substances of Very High Concern for Authorisation."

Placing a substance on the Candidate List triggers specific obligations for importers, producers, and suppliers of any article that contains one or more of these substances above 0.1 percent by weight per component. The obligations include providing sufficient information to allow safe use of the article to brand and retail customers or, upon request, to a consumer within 45 days of receipt of the request.

In addition, ECHA must be notified if the substance(s) are present in article components above 0.1 percent in quantities totaling over one ton per producer or importer per year. Notification is not required if the substance has already been registered for that use or when the producer or importer of an article can exclude exposure of humans and the environment during the use and disposal of the article. In such cases, the producer or importer must supply appropriate instructions to the recipient of the article.

ECHA periodically updates the Candidate List; find the most current version at https://www.echa.europa. eu/candidate-list-table.

AFIRM member brands may differ on how they address SVHCs as well as the legal obligations. AFIRM advises suppliers to consult with their customers regarding brand-specific requirements for SVHCs.

California Proposition 65 Substances

Each year, California publishes a list of chemicals known to the state to cause cancer or reproductive toxicity.

Businesses that expose individuals to one or more of these chemicals above various thresholds must provide a clear and reasonable warning before the exposure occurs. For consumer products, this is typically through warning labels on the products or retail signage. Note that this warning is not the same as a regulatory requirement indicating that the product is "unsafe" if a specific concentration is exceeded. Enforcement is carried out through civil lawsuits brought by the California attorney general, district attorneys, or private parties acting in the public interest.

Additional information can be found at https://oehha.ca.gov/proposition-65.

AFIRM member brands may differ on how they address warning-label requirements. AFIRM advises suppliers to consult with their customers regarding brand-specific requirements for Proposition 65 substances.

Important: Compliance with AFIRM restricted substance limits does not prevent public or private enforcers from asserting that products violate Proposition 65 warning obligations.

Specific In-country Testing and Certification Requirements

Some countries—such as Korea, Russia, and Saudi Arabia—have specific requirements for certain products.

This includes requiring that testing be performed at an approved laboratory in-country, special certification marks, and even unique testing not required by any other country. The AFIRM RSL covers these substance limit requirements, but test methods may vary, and AFIRM member brands may differ on how they address these legal obligations. AFIRM advises suppliers to consult with their customers regarding brand-specific requirements for countries which may have specific testing and/or certification requirements.

Biocides, Nanoparticles, Sensitizers, Endocrine Disruptors, Etc.

Some brands may have specific requirements regarding the use of substances of concern such as biocides, nanoparticles, sensitizers, and endocrine disruptors.

AFIRM recommends checking with your customers regarding individual policies or requirements.

AFIRM Chemical Information Sheets

AFIRM member brands have produced a comprehensive set of educational materials advising suppliers about best practices for chemicals management.

Each chemical information sheet covers a chemical or class of chemicals, giving an overview of the substance(s), where they are likely to be found in the material manufacturing process, and how to maintain compliance with the AFIRM RSL.

The sheets contain some information relevant to packaging, and future revisions will include more specific information.

The complete library of chemical information sheets is available on the AFIRM website at http://afirm-group.com/information-sheets; additionally, links to individual information sheets are embedded in the pages that follow.

The download icon next to a chemical or class of chemicals in the AFIRM RSL indicates that an information sheet is available.

Click on the icon or chemical name, and your web browser will open and download a PDF of the information sheet for that substance.

It is also used as a preservative in some foods and in marp house-hold products, mch as antisprice, mclichnes, and demetical. ² Formaldehyde can be used as one of the starting material in suillainte imparting testile performance features such a wrinkle free, dimensional stability, and stain resistant theread and the start of the starting particular Formaldehyde can be found a more with inforescent effects). It can also be used as a caracture in certain printing.
	 Odor control 	effects). It can also be used as a catalyst in certain printing, adhesive and heat transfer processes.

Why Formaldehyde is Restricted

Legislation in major markets around the world restricts the presence of formaldehyde in finished products. Formaldehyde is classified as a probable human carcinogen and is an irritant which can affect the eyes, nose, and throat. In high concentrations formaldehyde can cause severe pain, gastrointestinal effects, vomiting, coma or de

Formaldehyde is a chemical with wid

occurring naturally at low levels in foods and used in a watety of synthetic preparations. At room temperature formaldehyde is a colories, finnmable gas that has a distinct, pungent smell. Small amounts of formaldel

Sourcing Compliant Materials from Your Suppliers

- Contact your suppliers and explain that you require materials to be compliant with the current AFIRM RSL limits.² Materials should have no intentionally added formaldehyde, in the processing or as residues for the following: Heat transfer Prints (such as flock and discharge)
 - Adhesives or glu
- Addressives or gue

 Finishing agents

 Require suppliers to submit a confirmation of material compliance or a test report from a third-party la
 When materials are received, consider performing risk-based testing to ensure the current AFIRM RSL
- Check the Safety Data Sheets (SDS) of adhesives and glues to ensure formaldehyde is not listed as an ingredier

Definitions of Ages

Various countries define the terms "babies," "children," and "adults" differently. Based on legislation, the age ranges listed in Table 2 satisfy the most restrictive global requirements.

Definition of "Child Care Article"

Various countries define the term "child care article" differently. The most restrictive definition (based on global chemical legislation) includes articles designed or intended by the manufacturer to facilitate sleeping, relaxation, hygiene, feeding, sucking, or teething for children three years of age or younger.

Table 2. Definition of Ages

	Age Range
Babies	0 to 36 months
Children	36 months to 14 years
Adults	14 years and older

Definition of "Limit"

Some restrictions require that substance limits not be exceeded while others require that substance concentrations be below designated limits. For example, chromium VI must be below 3 ppm to be compliant with EU law. Test results should always be below designated limits to ensure compliance with all market requirements.

Definition of "Component"

A component is a part of a product consisting of a material of uniform composition throughout, or a combination of materials that cannot be disjoined or separated into different materials by abrasion, crushing, cutting, grinding, or unscrewing. Components should be thought of as articles themselves for purposes of RSL compliance and are subject to each specified concentration limit. This includes the 0.1% threshold above which SVHCs may require disclosure under the EU REACH Regulation.

Definition of "Reporting Limits"

Values above which labs should report substances detected for purposes of data capture and harmonization.

By reporting these values, instead of a simple PASS/ FAIL, the supply chain can capture information regarding the presence of substances below the RSL limit. The reporting limits also allow data to be harmonized between various testing labs. Reporting limits are values at or above the method Practical Quantification Limit (PQL). The PQL represents the lowest level at which accurate, precise, and robust data can be reported. AFIRM RSL reporting limits are widely achievable by laboratories across the global analytical testing industry and allow for combined (composite) testing where applicable.

Definitions of Material Types

For the purpose of this RSL, AFIRM offers these definitions of material types and provides examples of materials in Table 3, on the next page.

Natural fibers. Animal or vegetable fibers (including semi-synthetics).

Blended fibers. Woven or knitted materials created by blending two or more fiber types. For the purpose of this RSL, a blended fiber consists of a natural and a synthetic fiber.

Synthetic fibers. Human-made fibers based on synthetic chemicals (often from petroleum sources) such as polymers and extruded fibers.

Synthetic coated fabrics. Leather-like materials composed of a textile backing and, typically, a PU or PVC coating. May be referred to as artificial, imitation, vegan, or synthetic leather, or pleather.

Natural leather. Created by tanning animal rawhides.

Coating. A fluid, semi-fluid, or other material, with or without a suspension of finely divided coloring matter, which changes to a solid film when a thin layer is applied to a metal, wood, stone, paper, leather, cloth, plastic, or other surface.

Coatings do not include printing inks or those materials which actually become a part of the substrate, such as the pigment in a plastic article or those materials which are actually bonded to the substrate, such as by electroplating or ceramic glazing. See "synthetic coated fabrics" for leatherlike materials where the coating becomes part of the substrate.

Printing. The process of applying color to a fabric in definite patterns or designs.

Natural materials. Material derived from animals or plants that have undergone very little modification. Includes horn, bone, cork, wood, paper, and straw. Excludes natural fibers, natural leather, feathers, down, and metals.

Crystal. In this variety of glass, also known as lead glass, lead replaces calcium content of a typical potash glass. The addition of lead oxide gives crystal a much higher index of refraction than normal glass, and consequently much greater sparkle. Crystal typically contains at least 24% lead and is therefore exempt from many regulatory requirements for jewelry. In the European Union, labeling of crystal products is regulated by Council Directive 69/493/ EEC, which defines four categories based on the chemical composition and properties of the material.

Polymers and plastics. Plastics are composed of various polymers (typically from petroleum sources) usually mixed with additives including colorants, plasticizers, stabilizers, and fillers. These additives affect the chemical composition, chemical properties, and mechanical properties of the plastic.

Natural rubber. Elastic material made from latex sap or trees that can be vulcanized.

Synthetic rubber. Material made from petroleumbased monomers with properties similar to natural rubber.

Foam. Spongy material made by trapping air bubbles in a solid. These can be open cell or closed cell.

Metals. Chemical elements that can be lustrous, ductile, malleable, and good conductors of heat and electricity. Includes metals deposited by physical vapor deposition (PVD), chemical vapor deposition (CVD), or electroplating.

Feathers and down. Includes the smaller down feathers as well as the larger contour and flight feathers. See the International Down and Feather Bureau for specific down and feather definitions.

Glue. A substance capable of holding materials together by surface attachment.

Table 3. Examples of Materials within the Scope of the AFIRM RSL

NOTE: This list provides examples of materials within each category but is not exhaustive.

Change Log for the 2025 AFIRM RSL

CAS No.	Substance / Material	Modification	Page
Various	Azo-amines & Arylamine Salts	Updated test method for leather to EN ISO 17234-1:2024.	17
Various	Bisphenols	 BPA limit in textiles and leather lowered to 10 ppm. BPS, BPB, and BPF limits lowered to 200 ppm in textiles and 800 ppm in leather. 	18
Various	Chlorinated Benzenes and Toluenes	Updated test method to 17137:2024.	21
556-67-2	Octamethylcyclotetrasiloxane (D4)		
541-02-6	Decamethylcyclopentasiloxane (D5)	 Added new category for Cyclosiloxanes restricted under REACH and as SVHCs with limit of 1000 ppm each. Added testing recommendation in the Testing Matrix. 	13, 22
540-97-6	Dodecamethylcyclohexasiloxane (D6)		
Various	Brominated and Organophosphorus Substances	Renamed category from "Flame Retardants" to "Brominated and Organophosphorus Substances" since listed chemicals may have multiple uses.	13, 19
115-86-6	Triphenyl Phosphate (TPP)	 Added Triphenyl Phosphate (TPP) with a 500 ppm limit due to placement on the REACH SVHC list. 	13, 19
Various	Fluorinated Greenhouse Gases	Changed legal reference to Regulation (EU) 2024/573.	6, 25
Various	Heavy Metals (Jewelry)	• Updated test method to ASTM F963-23 as referenced in ASTM F2923:2020 for all metals except Nickel.	29,30
Various	Ozone-depleting Substances	Changed legal reference to Regulation (EU) Regulation (EU) 2024/590.	6, 33
Various	Per- and Polyfluoroalkyl Substances (PFAS)	 Changed total organic fluorine limit to 50 ppm. Divided PFOS restriction into "PFOS and its salts" and "PFOS-related substances" with new limits. Included PFHXA and its salts and PFHxA-related substance restrictions. 	34, 41
53306-54-0	Bis(2-propylheptyl) phthalate (DPHP)	Added new orthophthalate DPHP with an information reporting requirement.	36
3896-11-5	UV 326	Added UV Absorber UV 326 with a 1000 ppm limit due to its inclusion on the REACH SVHC list.	38
Various	Volatile Organic Compounds (VOCs)	 VOC substances moved to new Appendix D. Updated section to include existing VOCs from previous RSL versions, added 10 existing RSL substances from other RSL sections that are also VOCs and remain unchanged in;their original categories; and added 22 new VOCs based on hazard trait and ability to test with a single analysis. 	39, 43

AFIRM RSL Testing Matrix

In 2020, AFIRM redefined the recommended testing approach included in the RSL.

In previous years, AFIRM published a Risk Matrix, which gave guidance on risks for each listed substance or class of substances in different materials.

The Testing Matrix is a more prescriptive approach to help brands and suppliers effectively manage chemical risks by adopting a common testing approach for use and acceptance across different brands. Chemicals assigned a Level 1 in materials should be viewed as the minimum amount of testing required to satisfy AFIRM member requirements, and chemicals assigned a Level 2 are recommended for additional testing and may be required at brand discretion. Regular and self-governed testing of all relevant substances by suppliers will help to ensure the widest acceptance of third-party test reports by international brands. The Testing Matrix was developed by AFIRM brands utilizing multiple sources of information, including industry RSL testing information, a broad understanding of global supply chain operations, and from nearly two decades of managing restricted substances across a wide range of materials.

The Testing Matrix uses the following color codes:

- 2 Orange = Lower risk. Testing recommended and may be required at brand discretion.
- Blank = Lowest risk. Not anticipated in material.

Refer to footnotes for material-specific testing recommendations and exceptions.

Suppliers must check with their brand customers to understand if they will accept test reports according to this AFIRM Testing Matrix. Individual brand testing programs, to the extent they are different, supersede the AFIRM RSLTesting Matrix unless a brand indicates otherwise.

It is a goal of the AFIRM Group to reduce the testing burden on suppliers and streamline the RSL testing approach, while further reducing risk of restricted substances in materials and products. As brands adopt the AFIRM Testing Matrix into their RSL process, suppliers and AFIRM brands will be able to share test reports and data more easily, reducing the need for multiple RSL test submissions to satisfy different RSL requirements.

Determining Test Methods Using the AFIRM RSL Testing Matrix

The test methods listed in the RSL for specific materials correspond to the AFIRM RSL Testing Matrix.

A blank color code for any material will not have a corresponding test method.

For example, Metal has a blank color code for APEOs and therefore no test method is listed for APEOs for Metal in the RSL. If the RSL states "All Materials" or "All Materials Except," this means the test method is applicable to all materials listed with a color of 1 or 2 that do not have a specific test method listed.

AFIRM recommends consulting your testing laboratory to determine the best test method for any material not currently listed in this document.

Table 4. AFIRM RSL Testing Matrix

NOTE: For recycled materials, additional testing may be required at Level 1; check with each brand on requirements.

	Acidic & Alkaline Substances					
N/A	pH value	Textiles: $4.0 - 7.5$ Leather: Chrome-tanned: 3.2 - 5.5 Other: 3.5 - 7.5	 pH value is a characteristic number, ranging from pH 0 to pH 14, which indirectly shows the content of acidic or alkaline substances in a product. pH values less than 7 indicate sources of acidic substances, and values greater than 7 indicate sources of alkaline substances. To avoid irritation or chemical burns to the skin, the pH value of products must be in the range of human skin – approximately pH 5.5. AFIRM recommends the limits cited to comply with global regulations and to minimize the chances of Chromium VI formation during tanning and processing of leather. For chrome-tanned leather, the final fixing bath of the re-tanning process should always have a pH below 4.0 to guard against the formation of Chromium VI. Important: Egypt, Morocco, and the Gulf Cooperation Council (GCC) require pH for leather not lower than 3.5. 	Textiles and synthetic coated fabrics: EN ISO 3071:2020 Leather: EN ISO 4045:2018	N/A

	Heavy Metals (Non-Jewelry) Extractable 📃 & Total Content 📃		See Appendix A for separate South Korea KC Mark soluble Heavy Metal requirements.		
7440-36-0	Antimony (Sb)	Extractable: 30 ppm	Found in or used as a catalyst in polymerization of polyester, flame retardants, fixing agents, pigments, and alloys.	All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019	Extractable: 3 ppm
7440-38-2	Arsenic (As)	Extractable: 0.2 ppm Total: 100 ppm	Arsenic and its compounds can be used in preservatives, pesticides, and defoliants for cotton, synthetic fibers, paints, inks, trims, and plastics.	Extractable: All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019 Total: All materials except leather: DIN EN 16711-1:2016 Leather: DIN EN ISO 17072-2:2019	Extractable: 0.1 ppm Total: 10 ppm
7440-39-3	Barium (Ba)	Extractable: 1000 ppm	Barium and its compounds can be used in pigments for inks, plastics, and surface coatings, as well as in dyeing, mordants, filler in plastics, textile finishes, and leather tanning.	All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019	Extractable: 100 ppm
7440-43-9	Cadmium (Cd)	Extractable: 0.1 ppm Total: 40 ppm	Cadmium compounds may be used as pigments (especially in red, orange, yellow and green); as a stabilizer for PVC; and in fertilizers, biocides, and paints.	Extractable: All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019 Total: All materials except leather: DIN EN 16711-1:2016 Leather: DIN EN ISO 17072-2:2019	Extractable: 0.05 ppm Total: 5 ppm

CAS No.	Substance	Limits Component Materials in Finished Product	Potential Uses & Additional Information	Suitable Test Method Sample Preparation & Measurement	Reporting Limit Limits above which test results should be reported
	Heavy Metals (Non-Jewelry), continued		See Appendix A for separate South Korea KC Mark soluble Heavy Metal requirements.		
7440-47-3	Chromium (Cr)	Extractable: Textiles: Babies: 1 ppm Adults and children: 2 ppm	Chromium compounds can be used as dyeing additives; dye- fixing agents; colorfastness after- treatments; dyes for wool, silk, and polyamide (especially dark shades); and leather tanning. Important: Egypt and Morocco restrict extractable Chromium in leather products to 2 ppm for babies and 200 ppm for other ages.	Textiles: DIN EN 16711-2:2016 Leather: EN ISO 17072-1:2019	Extractable: 0.5 ppm
18540-29-9	Chromium VI	Extractable: Leather: 3 ppm Textiles: 1 ppm	Though typically associated with leather tanning, Chromium VI also may be used in the "after-chroming" process for wool dyeing (Chrome salts applied to acid-dyed wool to improve fastness). Important: Saudi Arabia and Egypt have a limit of Not Detected (< 0.5 ppm) in textiles.	Textiles: DIN EN 16711-2:2016 with EN ISO 17075-1:2017 if Cr is detected Leather: EN ISO 17075-1:2017 and EN ISO 17075-2:2017 for confirmation in case the extract causes interference. Alternatively, EN ISO 17075-2:2017 may be used on its own. Aging test: ISO 10195:2018 Method A2 at brand discretion (Aging required for footwear by India BIS).	Extractable: Leather: 3 ppm Textiles: 0.5 ppm
7440-48-4	Cobalt (Co)	Extractable: Adults: 4 ppm Children and babies: 1 ppm	Cobalt and its compounds can be used in alloys, pigments, dyestuff, and the production of plastic buttons.	All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019	Extractable: 0.5 ppm
7440-50-8	Copper (Cu)	Extractable: Adults: 50 ppm Children and babies: 25 ppm	Copper and its compounds can be found in alloys and pigments, and in textiles as an antimicrobial agent. Copper is exempt from restriction limits in Metal parts. Indonesia Ministerial Regulation No. 18 limits copper to 25 ppm the following products: towels, bedding, and handkerchiefs.	All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019	Extractable: 5 ppm

CAS No.	Substance	Limits Component Materials in Finished Product	Potential Uses & Additional Information	Suitable Test Method Sample Preparation & Measurement	Reporting Limit Limits above which test results should be reported
	Heavy Metals (Non-Jewelry), continued		See Appendix A for separate South Korea KC Mark soluble Heavy Metal requirements.		
7439-92-1	Lead (Pb)	Extractable: Adults: 1 ppm Children and babies: 0.2 ppm Total: 90 ppm	May be associated with alloys, plastics, paints, inks, pigments and surface coatings. Crystal or "lead glass" is exempt from total Lead restrictions. Indonesia Ministerial Regulation No. 18 limits extractable Lead to 0.2 ppm in towels, bedding, and handkerchiefs.	Extractable: All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019 Total: Non-metal: CPSC-CH-E1002-08.3 Metal: CPSC-CH-E1001-08.3 Lead in paint and surface coatings: CPSC-CH-E1003-09.1	Extractable: 0.2 ppm Total: 10 ppm
7439-97-6	Mercury (Hg)	Extractable: 0.02 ppm Total: 0.5 ppm	Mercury compounds can be present in pesticides and as contaminants in caustic soda (NaOH). They may also be used in paints and as catalysts in the manufacture of PU and vinyl chloride for use in PVC.	Extractable: All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019 Total: All materials except leather: DIN EN 16711-1:2016 Leather: DIN EN ISO 17072-2:2019	Extractable: 0.02 ppm Total: 0.1 ppm
7440-02-0	Nickel (Ni)	Extractable: 1 ppm Release (metal parts): Prolonged skin contact: 0.5 µg/cm²/week Eyewear frames: 0.5 µg/cm²/week	Nickel and its compounds can be used for plating alloys and improving corrosion-resistance and hardness of alloys. They can also occur as impurities in pigments and alloys.	Extractable: All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019 Release: EN 12472:2020 and EN 1811:2023 Release (eyewear frames): EN 16128:2015	Extractable: 0.1 ppm Release: 0.5 μg/cm²/ week
7782-49-2	Selenium (Se)	Extractable: 500 ppm	Selenium and its compounds may be found in paints and inks. Important: Morocco and Egypt now have a 100 ppm limit.	All materials except leather: DIN EN 16711-2:2016 Leather: DIN EN ISO 17072-1:2019	Extractable: 50 ppm

CAS No.	Substance	Limits Component Materials in Finished Product		Suitable Test Method Sample Preparation & Measurement	Reporting Limit Limits above which test results should be reported
	Heavy Metals (Jewelry)			Sample preparation for jewelry and wearables: Wax areas not intended for skin- contact: EN 1811:2023	
7440-36-0	Antimony (Sb)	Paints & Coatings: Extractable: 60 ppm	Antimony and its compounds can be used as a Flame Retardant in paints, as well as a colorant in pigments.	ASTM F963-23 as referenced in ASTM F2923:2020	Extractable: 5 ppm
7440-38-2	Arsenic (As)	Paints & Coatings: Extractable: 25 ppm	S: Arsenic and its compounds can be used in paints and inks. ASTM F963-23 as referenced in ASTM F2923:2020		Extractable: 5 ppm
7440-39-3	Barium (Ba)	Paints & Coatings: Extractable 1000 ppm	Barium and its compounds can be used in pigments for inks	ASTM F963-23 as referenced in ASTM F2923:2020	Extractable: 100 ppm
7440-43-9	Cadmium (Cd)	Substrates, Paints & Coatings: Total: Adults: 75 ppm Children: 40 ppm	batings:used as pigments (especially in red, orange, yellow, and green).ASTM F963-23 as referenced in ASTM F2923:2020ts: 75 ppmimprove hardness or be found as a		Total: 5 ppm
7440-47-3	Chromium (Cr)	Paints & Coatings: Extractable: 60 ppm	Chromium and its compounds can be used as pigments in paints. It can also be used as part of alloys such as stainless steel.	ASTM F963-23 as referenced in ASTM F2923:2020	Extractable: 5 ppm
7439-92-1	Lead (Pb)			ASTM F963-23 as referenced in ASTM F2923:2020	Total: 10 ppm

CAS No. Substance		Limits Component Materials in Finished Product	Potential Uses & Additional Information	Suitable Test Method Sample Preparation & Measurement	Reporting Limit Limits above which test results should be reported

28553-12-0 117-84-0	Phthalates Di-lso-nonylphthalate (DINP) Di-n-octylphthalate (DNOP)	_			
117-81-7 26761-40-0 85-68-7 84-74-2 84-69-5 84-75-3 84-66-2 131-11-3 131-18-0 84-61-7 71888-89-6 117-82-8 605-50-5 131-16-8 27554-26-3 68515-50-4 71850-09-4 68515-42-4 84777-06-0 68648-93-1 68515-51-5 776297-69-9 26040-51-7	Di(2-ethylhexyl)-phthalate (DEHP) Diisodecylphthalate (DIDP) Butylbenzylphthalate (DBP) Dibutylphthalate (DBP) Disobutylphthalate (DBP) Di-n-hexylphthalate (DHP) Diethylphthalate (DPP) Dimethylphthalate (DPP) Diversettylphthalate (DPP) Dirn-pentyl phthalate (DCHP) 1,2-Benzenedicarboxylic acid, di-C6-8-branched alkyl esters, C7-rich Bis(2-methoxyethyl) phthalate (DIPP) Disooctyl phthalate (DPP) Disooctyl phthalate (DIPP) 1,2-Benzenedicarboxylic acid, dihexyl ester, branched and linear Disohexyl phthalate (DIPP) 1,2-Benzenedicarboxylic acid, di-C7-11-branched and linear alkyl esters (DHNUP) 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters or mixed decyl and hexyl and octyl diesters with ≥ 0.3% of dihexyl phthalate; 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters 0.3% of dihexyl phthalate; 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters 0.3% of dihexyl phthalate; 1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters	500 ppm each Total: 1000 ppm	Esters of ortho-phthalic acid (Phthalates) are a class of organic compound commonly added to plastics to increase flexibility. They are sometimes used to facilitate the molding of plastic by decreasing its melting temperature. Phthalates can be found in: • Flexible plastic components (e.g., PVC) • Print pastes • Adhesives • Plastic buttons • Plastic buttons • Plastic sleevings • Polymeric coatings Listed here are all legally restricted phthalates as well as those included on the REACH substances of very high concern (SVHC) candidate list at the time of publication. Suppliers should assume that the AFIRM RSL includes all phthalates on the SVHC list—whether itemized here or not— since the list is updated frequently. Other ortho-phthalates (like DPHP) may have similar toxicological characteristics to those listed. Before using any unlisted ortho- phthalates, please make sure to have a sound toxicology study from your chemical supplier. If you are unsure, please communicate with your brand customer.	Sample preparation for all materials: CPSC-CH-C1001-09.4 Measurement: Textiles: GC/MS, EN ISO 14389:2022 (8.1 Calculation based on weight of print only; 8.2 Calculation based on weight of print and textile if print cannot be removed). All materials except textiles: GC/MS	50 ppm each
53306-54-0	Bis(2-propylheptyl) phthalate (DPHP)	For informational p testing to assess c	urposes only. AFIRM recommends ontent levels.	-

	Volatile Organic Compounds (VOCs)				
71-43-2	Benzene	5 ppm	The VOCs in Appendix D represent a broad range of potentially		5 ppm
Various	Other: See Appendix D for a complete list.	Total: 500 ppm	harmful substances that can be semiquantified using the prescribed headspace method. Upon conducting this test, substances that also appear in other sections of the RSL with specific test methods and limit values may be detected, and further testing may be appropriate to assess product conformance. The substances in Appendix D should not be used in textile auxiliary chemical preparations. They are associated with solvent- based processes such as solvent- based polyurethane coatings, glues/ adhesives, and polymer manufacturing. They should not be used for any kind of facility or spot cleaning. Individual VOCs should be reported if found > 100 ppm and confirmation testing may be required, especially for substances also included in other sections of the RSL with dedicated limits. AFIRM will come out with additional guidance on testing VOCs in the near future.	For general VOC screening: GC/MS headspace 45 minutes at 120° C	Other: 100 ppm each

Appendix A. South Korea KC Mark Soluble Heavy Metal Requirements

NOTE: South Korea KC Mark requirements apply to the migration of Heavy Metals from surface coatings/paints, synthetic resins, and paper materials in products intended to be placed in the mouth of children and products intended for infants.

CAS No.	Substance	Limits	Suitable Test Method
7440-36-0	Antimony (Sb)	60 ppm

	PFOA-related Substances	39239-77-5	1H,1H,2H,2H-perfluorotetradecan-1-ol (12:2 FTOH)
39108-34-4	1H,1H,2H,2H-Perfluorodecanesulfonic acid (8:2 FTS)	120226-60-0	1H,1H,2H,2H-Perfluorododecanesulphonic acid (10:2 FTS)
376-27-2	Methyl perfluorooctanoate (Me-PFOA)	2043-54-1	1H,1H,2H,2H-Perfluorododecyl iodide (10:2 FTI)
3108-24-5	Ethyl perfluorooctanoate (Et-PFOA)	30046-31-2	1H,1H,2H,2H-Perfluorotetradecyl iodide (12:2 FTI)
678-39-7	2-Perfluorooctylethanol (8:2 FTOH)		PFHxA and Its Salts
27905-45-9	1H,1H,2H,2H-Perfluorodecyl acrylate (8:2 FTA)	307-24-4	Perfluorohexanoic Acid (PFHxA, C6-PFCA)
1996-88-9	1H,1H,2H,2H-Perfluorodecyl activate (8:2 FTMA)		PFHxA-related Substances
27854-31-5	2H,2H-Perfluorodecanoic acid (H2PFDA)	17527-29-6	1H,1H,2H,2H-Perfluorooctyl acrylate (6:2 FTA)
	PFHxS and Its Salts	2144-53-8	1H,1H,2H,2H-Perfluorooctyl methacrylate (6:2 FTMA)
355-46-4	Perfluorohexane Sulfonic acid (PFHxS)	27619-97-2	1H,1H,2H,2H-Perfluorooctanesulfonic acid (6:2 FTS)
3871-99-6	Perfluorohexane Sulfonic acid, potassium salt (PFHxS-K)	647-42-7	1H,1H,2H,2H-Perfluorooctanol (6:2 FTOH)

Appendix C. Pesticides and Herbicides, Agricultural

CAS No.	Pesticide Name	CAS No.	Pesticide Name	CAS No.	Pesticide Name
93-72-1	2-(2,4,5-trichlorophenoxy) propionic acid, its salts and compounds; 2,4,5-TP	333-41-5	Diazinone	465-73-6	Isodrine
		1085-98-9	Dichlofluanide	4234-79-1	Kelevane
93-76-5	2,4,5-T	120-36-5	Dichloroprop	143-50-0	Kepone
94-75-7	2,4-D	115-32-2	Dicofol	58-89-9	Lindane
309-00-2	Aldrine	141-66-2	Dicrotophos	121-75-5	Malathione
86-50-0	Azinophosmethyl	60-57-1	Dieldrine	94-74-6	MCPA
2642-71-9	Azinophosethyl	60-51-5	Dimethoate	94-81-5	МСРВ
4824-78-6	Bromophos-ethyl	88-85-7	Dinoseb, its salts and acetate	93-65-2	Mecoprop
2425-06-1	Captafol Carbaryl	63405-99-2	DTTB (4, 6-Dichloro-7 (2,4,5-trichloro- phenoxy) -2-Trifluoro methyl benz imidazole)	10265-92-6	Metamidophos
63-25-2				72-43-5	Methoxychlor
510-15-6	Chlorbenzilat	115-29-7	Endosulfan	2385-85-5	Mirex
57-74-9	Chlordane	959-98-8	Endosulfan I (alpha)	6923-22-4	Monocrotophos
6164-98-3	Chlordimeform	33213-65-9	Endosulfan II (beta)	298-00-0	Parathion-methyl
470-90-6	Chlorfenvinphos	72-20-8	Endrine	1825-21-4	Pentachloroanisole
1897-45-6	Chlorthalonil	66230-04-4	Esfenvalerate	7786-34-7	Phosdrin/Mevinphos
56-72-4	Coumaphos	106-93-4	Ethylendibromid	72-56-0	Perthane
68359-37-5	Cyfluthrin	56-38-2	Ethylparathione; Parathion	31218-83-4	Propethamphos
91465-08-6	Cyhalothrin	51630-58-1	Fenvalerate	41198-08-7	Profenophos
52315-07-8	Cypermethrin	Various	Halogenated naphthalenes, including polychlorinated naphthalenes (PCNs)	13593-03-8	Quinalphos
78-48-8	S,S,S-Tributyl phosphorotrithioate (Tribufos)			82-68-8	Quintozene
52918-63-5	Deltamethrin	76-44-8	Heptachlor	8001-50-1	Strobane
53-19-0		1024-57-3	Heptachloroepoxide	297-78-9	Telodrine
72-54-8	DDD	36355-01-8	Hexabromobiphenyl	8001-35-2	Toxaphene
3424-82-6		319-84-6	a-Hexachlorocyclohexane with & without Lindane	731-27-1	Tolylfluanide
72-55-9	DDE	319-85-7	b-Hexachlorocyclohexane with & without Lindane	1582-09-8	Trifluraline
50-29-3		319-86-8	g-Hexachlorocyclohexane with & without Lindane		
789-02-6	DDT	118-74-1	Hexachlorobenzene		

Appendix D. Volatile Organic Compounds (VOCs)

Existing VOCs from Previous Versions of the AFIRM RSL		VOCs Restricted in Other Sections of the AFIRM RSL		VOCs Added to	VOCs Added to the 2025 AFIRM RSL	
CAS No.	VOC Name	CAS No.	VOC Name	CAS No.	VOC Name	
75-15-0	Carbon Disulfide	95-50-1	1,2-Dichlorobenzene	96-18-4	1,2,3-trichloropropane	
56-23-5	Carbon Tetrachloride	106-46-7	1,4-Dichlorobenzene	78-87-5	1,2,Dichloropropane	
67-66-3	Chloroform	872-50-4	1-Methyl-2-pyrrolidione	111-15-9	2-Ethoxyethyl acetate	
108-94-1	Cyclohexanone	617-94-7	2-phenyl-2-propanol	149-57-5	2-Ethylhexane acid	
107-06-2	1,2-Dichloroethane	98-86-2	Acetophenone	62-53-3	Aniline	
75-35-4	1,1-Dichloroethylene	75-12-7	Formamide	111-96-6	Bis(2-methoxyethyl)ether	
100-41-4	Ethylbenzene	127-19-5	N,N-Dimethylacetamide (DMAC)	78-59-1	Isophorone	
76-01-7	Pentachloroethane	91-20-3	Naphthalene	108-95-2	Phenol	
630-20-6	1,1,1,2- Tetrachloroethane	68-12-2	N-N-Dimethylformamide (DMFa)	109-99-9	THF	
79-34-5	1,1,2,2- Tetrachloroethane	100-42-5	Styrene	106-94-5	1-bromopropane	
127-18-4	Tetrachloroethylene (PERC)			70657-70-4	1-PG2MEA 1-Propanol,2-methoxy-, acetate)	
108-88-3	Toluene			111-77-3	2-(2-Methoxyethoxy)ethanol	
71-55-6	1,1,1- Trichloroethane			584-84-9	2,4-toluene diisocyanate	
79-00-5	1,1,2- Trichloroethane			110-80-5	2-ethoxyethanol	
79-01-6	Trichloroethylene			109-86-4	2-Methoxyethanol EGME (ethylene glycol monomethyl ether)	
1330-20-7	Xylenes (meta-, ortho-, para-)			1589-47-5	2-Methoxypropan-1-ol	
108-38-3				110-71-4	EGDME (Ethylene glycol dimethyl ether)	
95-47-6				110-49-6	EGMEA (Ethylene glycol monomethyl ether acetate)	
106-42-3				67-72-1	Hexachloroethane	
				75-09-2	Merhylene chloride (dichloromethane)	
				110-54-3	n-hexane	
				112-49-2	TEGDME (Triethylene glycol dimethyl ether)
